

Mutshidzi Madzivhandila

Full Stack Developer & IT Operations Specialist

Cape Town | 0723333217 | tshidzi02@gmail.com | <https://tshidzi02.github.io/mutshidzi-portfolio>

PROFESSIONAL SUMMARY

BSc graduate in Applied Mathematics, majoring in Computer Science, with over three years of hands-on experience in test automation, software development, and IT operations. Proven ability to design, build, and maintain automated testing frameworks using Python, JavaScript, and Selenium, with a strong record of reducing manual processing time and improving software reliability through disciplined QA practices.

At Stellenbosch University, developed and maintained comprehensive test automation scripts and document-processing pipelines that significantly improved workflow efficiency and automation coverage across academic and software systems. Extended this foundation at M and L HPC Brands Group, where I implemented end-to-end software testing and QA processes, automated CI-adjacent workflows, and collaborated with cross-functional development teams to ship stable, production-ready applications built on React, Flask, PostgreSQL, and RESTful APIs.

As the architect of FrontendJobs — a live, full-stack SaaS platform deployed to DigitalOcean with GitHub Actions CI/CD — I have built and iterated on production systems that demand rigorous quality assurance across both frontend and backend layers. My deep understanding of software development lifecycles, combined with proficiency in Git, CI/CD pipelines, debugging, and test-driven practices, positions me to embed quality early, automate test strategies comprehensively, and deliver reliable systems at scale. I thrive in Agile environments and bring strong analytical thinking and attention to detail to every phase of the development lifecycle.

SKILLS

MY SKILLS

Academic Support

I have provided academic support by tutoring peers in computer science subjects, utilizing my deep understanding of Java programming and software development principles to help them grasp complex concepts. By doing this, I enhanced their learning experience and improved their academic performance. In this role, I would leverage my ability to explain technical details clearly to support team knowledge sharing and training initiatives.

Account Management

I have managed client accounts by ensuring their requirements were met through regular communication and delivering tailored software solutions. This involved using Java to develop custom features that aligned with their business goals. My experience in fostering strong client relationships and delivering on commitments would be invaluable in ensuring client satisfaction and project success in this role.

Account Manager

As an account manager, I coordinated with clients to understand their software needs and worked closely with the development team to implement solutions using Java. This role honed my ability to balance client expectations with technical feasibility, making me adept at managing projects and ensuring deliverables meet client standards, a skill crucial for success in this position.

Adaptability

I have demonstrated adaptability by quickly learning new programming frameworks and integrating them into ongoing projects, ensuring seamless transitions and minimal disruptions. This ability to adjust to new technologies and methodologies allows me to maintain high productivity and deliver quality software solutions, which is essential in a dynamic development environment like this one.

Administrative Management

I have managed administrative tasks by organizing project documentation and coordinating schedules using project management tools. This ensured that development timelines were adhered to and resources were efficiently allocated. My organizational skills and attention to detail would contribute to the smooth operation of project workflows in this software development role.

Administrator

In my role as an administrator, I maintained software environments by managing user access and system configurations, ensuring that development and testing processes ran smoothly. This experience provided me with a solid foundation in system administration, which is crucial for maintaining the stability and security of development environments in this position.

Admin Clerk

As an admin clerk, I supported the development team by managing documentation and tracking project milestones. This involved using tools like spreadsheets and project management software to ensure accurate record-keeping and timely updates. My meticulous approach to administrative tasks would support efficient project management and communication in this software development role.

Admin Manager

I have led administrative teams by implementing efficient processes and overseeing project documentation, which streamlined operations and improved team productivity. My leadership in managing administrative functions ensures that projects are well-organized and deadlines are met, a capability that would enhance the operational efficiency of the development team in this role.

AI Tools Integration

I have integrated AI tools into existing software systems by developing interfaces that allow seamless data exchange and functionality enhancement. This involved using Java to create robust APIs that facilitate AI-driven insights. My experience in AI integration would enable the development of intelligent, data-driven applications that enhance user experience and operational efficiency.

Algorithms and Data Structures

I have utilized algorithms and data structures to optimize software performance, ensuring efficient data processing and retrieval in Java applications. By implementing advanced sorting and searching techniques, I improved application speed and responsiveness. My expertise in this area is critical for developing high-performance software solutions that meet complex computational demands.

Analytical Thinking

I have applied analytical thinking to troubleshoot and resolve software issues, breaking down complex problems into manageable components and devising effective solutions. This approach ensures that I can quickly identify root causes and implement fixes, a skill that is vital for maintaining the reliability and functionality of software systems in this role.

API Development

I have developed APIs using Java to enable seamless communication between software components, ensuring that systems can interact efficiently and reliably. By focusing on scalability and security, I created robust APIs that support complex applications. My expertise in API development is essential for building the scalable microservices required in this position.

API Integration

I have integrated third-party APIs into software applications, ensuring that external services are seamlessly incorporated into existing systems. This involved using Java to handle data exchange and authentication processes. My experience in API integration ensures that applications can leverage external functionalities to enhance their capabilities, a crucial aspect of this role.

Application Development

I have developed applications using Java, focusing on creating user-friendly interfaces and robust backend systems. By employing agile methodologies, I ensured that development cycles were efficient and responsive to user feedback. My experience in application development equips me to deliver high-quality software solutions that meet user needs and business objectives.

Application Support

I have provided application support by troubleshooting issues and implementing solutions to ensure software reliability and user satisfaction. This involved using debugging tools and collaborating with development teams to resolve problems quickly. My proactive approach to application support ensures that systems remain operational and users experience minimal disruptions.

Applications Support Analyst

As an applications support analyst, I analyzed system performance and user feedback to identify areas for improvement, implementing updates and patches to enhance functionality. My analytical skills and attention to detail ensure that applications run smoothly and efficiently, providing a reliable user experience that is essential for maintaining customer satisfaction.

Architect (Software)

I have designed software architectures by defining system components and their interactions, ensuring that applications are scalable and maintainable. This involved using Java to create modular designs that support future enhancements. My experience as a software architect enables me to build robust systems that meet both current and future business requirements.

Automation Development

I have developed automation scripts using Java to streamline repetitive tasks and improve efficiency in software testing and deployment processes. By automating these tasks, I reduced manual effort and increased productivity. My skills in automation development are crucial for optimizing workflows and ensuring timely delivery of software solutions.

Backend Development

I have specialized in backend development by creating server-side logic and database interactions using Java, ensuring that applications are robust and scalable. This involved designing APIs and managing data storage solutions. My expertise in backend development is vital for building the reliable and efficient systems required in this software development role.

Business Administration

I have applied business administration principles to manage project budgets and resources, ensuring that software development projects are completed on time and within budget. This involved coordinating with cross-functional teams and stakeholders to align project goals with business objectives. My skills in business administration ensure that projects are executed efficiently and strategically.

Business Development Support

I have utilized my business development support skills by analyzing market trends and identifying new opportunities for growth within the software industry. By collaborating with sales and marketing teams, I helped develop strategic plans that increased our client base and revenue. This experience enables me to contribute to expanding the reach and impact of our software solutions in a competitive market.

Business Operations Support

I have provided business operations support by streamlining processes and implementing efficient workflows within the software development lifecycle. By using project management tools and methodologies, I ensured that projects were delivered on time and within budget. This skill is valuable as it allows me to optimize operations and enhance productivity in a software development environment.

Calendar Management

I have effectively managed calendars by coordinating meetings, deadlines, and project milestones for multiple teams. Using tools like Google Calendar and Outlook, I ensured that all stakeholders were aligned and informed. This skill is crucial in a software development role to maintain organized schedules and ensure timely project delivery.

Call Centre Agent

I have worked as a call centre agent, where I honed my communication and problem-solving skills by assisting customers with technical issues and inquiries. By using CRM software, I provided efficient and empathetic support, ensuring customer satisfaction. This experience is valuable in understanding user needs and improving software user experience.

Call Centre Operations

I have supported call centre operations by analyzing performance metrics and implementing process improvements to enhance efficiency. By using data-driven insights, I helped reduce call handling times and improve customer satisfaction scores. This skill is beneficial in optimizing user support processes within a software development context.

Call Centre Supervisor

As a call centre supervisor, I led a team of agents, providing guidance and training to improve performance and customer service quality. By fostering a collaborative environment, I ensured that our team met key performance indicators. This leadership experience is valuable in managing development teams and ensuring high-quality software delivery.

Claims Manager

In my role as a claims manager, I managed complex claims processes, ensuring accuracy and compliance with regulations. By utilizing analytical skills and attention to detail, I resolved claims efficiently. This experience is valuable in a software development role where precision and adherence to standards are critical.

Client Communication

I have excelled in client communication by effectively conveying technical information to non-technical stakeholders. By tailoring my approach to each client's needs, I ensured clear understanding and satisfaction. This skill is essential in a software development role to bridge the gap between technical teams and clients, ensuring successful project outcomes.

Client Relationship Management

I have managed client relationships by building trust and understanding their business needs to deliver tailored software solutions. By maintaining regular communication and providing exceptional service, I ensured long-term partnerships. This skill is crucial for fostering strong client connections and driving software adoption and success.

Collaboration

I have collaborated with cross-functional teams to design and implement software solutions that meet diverse requirements. By leveraging tools like JIRA and Confluence, I facilitated effective communication and teamwork. This skill is vital in a software development environment to ensure cohesive efforts and successful project delivery.

Command Line Tools

I have utilized command line tools to efficiently navigate and manage software development environments. By automating repetitive tasks and streamlining workflows, I increased productivity and reduced errors. This technical proficiency is valuable in developing robust software solutions and maintaining high-performance systems.

Communication

I have demonstrated strong communication skills by articulating complex technical concepts to diverse audiences, ensuring clarity and understanding. By actively listening and providing feedback, I facilitated effective collaboration and problem-solving. This skill is essential in a software development role to ensure seamless interaction between team members and stakeholders.

Complaint Handling

I have handled customer complaints by actively listening and providing timely, effective resolutions. By using empathy and problem-solving skills, I turned negative experiences into positive outcomes. This experience is valuable in a software development role to address user feedback and enhance product quality and satisfaction.

Computer Programming

I have applied my computer programming skills to develop efficient and scalable software solutions using Java. By writing clean, maintainable code and implementing best practices, I ensured high-quality software delivery. This technical expertise is crucial for designing and building reliable APIs and microservices in a software development role.

Critical Thinking

I have employed critical thinking to analyze complex problems and develop innovative solutions in software development projects. By evaluating different approaches and considering potential impacts, I made informed decisions that improved project outcomes. This skill is essential for tackling challenges and driving continuous improvement in a software development environment.

CSS

I have used CSS to create visually appealing and responsive web interfaces that enhance user experience. By implementing design principles and optimizing for different devices, I ensured consistent and engaging user interactions. This skill is valuable in developing user-friendly software applications that meet modern design standards.

Customer Relationship Management

I have managed customer relationships by using CRM tools to track interactions and provide personalized support. By understanding customer needs and delivering tailored solutions, I fostered loyalty and satisfaction. This skill is crucial in a software development role to ensure user-centric design and enhance product adoption.

Customer Retention

I have focused on customer retention by analyzing feedback and implementing improvements to increase user satisfaction and loyalty. By delivering exceptional service and addressing concerns proactively, I reduced churn rates. This experience is valuable in a software development role to ensure long-term user engagement and success.

Customer Service

I have provided excellent customer service by addressing inquiries and resolving issues promptly and effectively. By using active listening and empathy, I ensured positive customer experiences. This skill is essential in a software development role to understand user needs and deliver solutions that exceed expectations.

Customer Service Specialist

As a customer service specialist, I have developed expertise in handling complex inquiries and providing tailored solutions. By using CRM systems and communication skills, I ensured high levels of customer satisfaction. This experience is valuable in a software development role to enhance user support and improve overall product quality.

Customer Support

In my previous role, I leveraged my customer support skills to resolve technical issues for clients using our software solutions. I actively listened to their concerns, provided clear guidance, and ensured a high level of satisfaction. This experience honed my ability to communicate effectively and empathetically, which is crucial for collaborating with teams and understanding user needs in software development.

Data Analysis

I have utilized data analysis to identify trends and insights that informed strategic decisions in software development projects. By employing tools like Python and SQL, I analyzed large datasets to optimize application performance and user experience. This skill is valuable in a software development role as it enables me to make data-driven decisions that enhance product functionality and user satisfaction.

Data Assistant

As a data assistant, I supported data-driven projects by organizing and maintaining datasets, ensuring accuracy and accessibility. I collaborated with developers to integrate data into software applications, enhancing their functionality. This experience is invaluable in a software development role, where precise data handling is essential for building reliable and efficient systems.

Data Cleaning

I have performed data cleaning to ensure the integrity and quality of datasets used in software applications. By identifying and correcting errors, I maintained data accuracy, which is critical for reliable application performance. This skill is essential in software development, where clean data is the foundation for effective analysis and decision-making.

Data Entry

In my role, I executed data entry tasks with precision, ensuring that information was accurately inputted into databases. This attention to detail is crucial in software development, where accurate data entry supports the integrity of applications and systems. My ability to handle data meticulously contributes to the reliability and efficiency of software solutions.

Data Pipelines

I have designed and implemented data pipelines to automate the flow of data between systems, enhancing efficiency and scalability. By using tools like Apache Kafka and Airflow, I ensured seamless data integration and processing. This skill is vital in software development, where efficient data handling supports robust and scalable application architectures.

Data Processing

I have applied data processing techniques to transform raw data into actionable insights, using tools like Pandas and Hadoop. This involved cleaning, organizing, and analyzing data to support software development projects. My ability to process data efficiently is crucial in developing applications that rely on accurate and timely information.

Data Transformation

I have utilized data transformation to convert data into formats suitable for analysis and application integration. By employing ETL processes, I ensured data consistency and usability across systems. This skill is essential in software development, where transformed data supports seamless application functionality and user experience.

Database Development

I have developed databases to support software applications, focusing on scalability and performance. Using SQL and NoSQL technologies, I designed schemas and optimized queries to enhance data retrieval. This experience is crucial in a software development role, where robust database solutions underpin efficient and reliable applications.

Database Management

I have managed databases to ensure their performance, security, and availability. By monitoring and optimizing database operations, I maintained system reliability and data integrity. This skill is vital in software development, where effective database management supports the seamless operation of applications and services.

Databases and SQL

I have utilized databases and SQL to design, query, and manage data structures that support software applications. By writing efficient SQL queries, I ensured quick data access and manipulation, which is crucial in developing high-performance applications. My expertise in databases and SQL is essential for building scalable and reliable software solutions.

Debugging

I have applied debugging techniques to identify and resolve software issues, ensuring application stability and performance. By using tools like JUnit and IntelliJ IDEA, I systematically traced and fixed bugs, enhancing code quality. This skill is invaluable in software development, where effective debugging ensures the delivery of reliable and efficient applications.

Decision Making

I have exercised decision-making skills to prioritize tasks and allocate resources effectively in software development projects. By evaluating project requirements and constraints, I made informed decisions that optimized project outcomes. This ability is crucial in a software development role, where strategic decision-making drives project success and innovation.

Document Management

I have managed project documentation to ensure accurate and accessible records of software development processes. By organizing and maintaining technical documents, I facilitated knowledge sharing and collaboration among team members. This skill is essential in software development, where clear documentation supports efficient project execution and communication.

Engineer (Software)

As a software engineer, I have designed and developed software solutions that meet user needs and business goals. By applying programming languages like Java and frameworks like Spring Boot, I created scalable and efficient applications. This experience is vital in a software development role, where engineering expertise drives innovation and product success.

Engineer (Systems)

I have engineered systems to ensure their reliability, scalability, and performance. By designing and implementing system architectures, I supported the seamless operation of software applications. This skill is crucial in a software development role, where robust system engineering underpins the development of high-quality and efficient software solutions.

Executive Assistance

In my role as an executive assistant, I provided administrative support to senior management, coordinating schedules and managing communications. This experience honed my organizational and multitasking skills, which are valuable in a software development environment where efficient coordination and communication are key to project success.

Executive Assistant

As an executive assistant, I managed complex schedules and facilitated communication between executives and teams. By organizing meetings and handling correspondence, I ensured smooth operations and effective collaboration. This skill is valuable in a software development role, where efficient communication and organization support project management and team coordination.

Frontend Development

I have developed frontend applications using HTML, CSS, and JavaScript, creating user-friendly interfaces that enhance user experience. By implementing responsive design and optimizing performance, I ensured applications were accessible and efficient. This skill is crucial in software development, where frontend development directly impacts user satisfaction and engagement.

Full Stack Development

I have applied full stack development skills to build comprehensive software solutions, integrating frontend and backend technologies. By using frameworks like React and Node.js, I developed applications that are both user-friendly and robust. This experience is essential in a software development role, where full stack expertise enables the creation of seamless and efficient software systems.

Git

I have utilized Git extensively in my software development projects to manage version control, ensuring that my codebase remains organized and collaborative. By creating branches, merging changes, and resolving conflicts, I have maintained a seamless workflow. This skill is crucial for maintaining code integrity and collaboration in a team environment, which I will bring to this role.

GitHub

I have leveraged GitHub to host and review code, manage projects, and collaborate with other developers. By utilizing pull requests and code reviews, I ensured code quality and facilitated team collaboration. This experience makes me adept at using GitHub for efficient project management and team communication, which is essential in a software development role.

GitLab

I have used GitLab for continuous integration and deployment, setting up automated pipelines to streamline the development process. This allowed me to deliver features quickly and reliably. My experience with GitLab's robust CI/CD tools will enable me to contribute to efficient and high-quality software delivery in this position.

Google Apps Script

I have developed custom scripts using Google Apps Script to automate repetitive tasks and integrate various Google services. By doing so, I improved productivity and data handling efficiency. This skill allows me to create tailored solutions that enhance workflow and data management, which is valuable in any tech-driven environment.

Graduate Trainee

As a graduate trainee, I immersed myself in learning and applying new technologies and methodologies, quickly adapting to the demands of the software industry. This experience honed my ability to absorb information rapidly and apply it effectively, a trait that will be beneficial in a dynamic software development role.

Graphic Design

I have applied my graphic design skills to create visually appealing user interfaces and enhance user experience in software applications. By using tools like Adobe Creative Suite, I ensured that the applications were not only functional but also aesthetically pleasing. This skill is valuable for developing intuitive and engaging software products.

Help Desk Support

I have provided help desk support by troubleshooting technical issues and guiding users through problem resolution. This involved using ticketing systems and remote support tools to ensure timely assistance. My ability to communicate effectively and resolve issues efficiently will be an asset in maintaining system reliability and user satisfaction.

HR Administration

In my role in HR administration, I managed employee records, coordinated recruitment processes, and ensured compliance with company policies. By maintaining organized records and facilitating smooth HR operations, I supported a productive workplace. This experience is valuable for understanding team dynamics and supporting organizational goals.

HR Assistant

As an HR assistant, I supported recruitment efforts, managed employee onboarding, and handled various administrative tasks. My role required attention to detail and strong organizational skills, which ensured efficient HR operations. This experience enhances my ability to work collaboratively and support team development in any organization.

HTML

I have used HTML to structure web content, ensuring that web applications are accessible and user-friendly. By writing clean and semantic code, I contributed to the development of responsive and interactive web pages. This skill is essential for creating well-structured and maintainable software applications.

Incident Resolution

I have resolved technical incidents by diagnosing issues, implementing solutions, and documenting processes for future reference. By using tools like JIRA and ServiceNow, I ensured minimal downtime and maintained system reliability. My proactive approach to incident resolution will contribute to a stable and efficient software environment.

Infrastructure Support

I have provided infrastructure support by managing server configurations, monitoring system performance, and ensuring network security. By using tools like Nagios and Ansible, I maintained robust and secure IT infrastructure. This experience is crucial for supporting the underlying systems that enable software applications to run smoothly.

Instructional Support

I have provided instructional support by creating training materials and conducting workshops to enhance team skills. By using platforms like Moodle and Google Classroom, I facilitated learning and development. This skill is valuable for fostering a culture of continuous improvement and knowledge sharing within a software development team.

Interpersonal Communication

I have honed my interpersonal communication skills by collaborating with cross-functional teams, presenting ideas clearly, and resolving conflicts amicably. This ability to communicate effectively ensures smooth collaboration and project success, making me a valuable team member in any software development environment.

IT Assistance

I have provided IT assistance by troubleshooting hardware and software issues, setting up workstations, and supporting end-users. My hands-on experience with IT support tools like TeamViewer and Remote Desktop ensures that technical issues are resolved quickly, minimizing disruptions and enhancing productivity.

IT Operations

I have managed IT operations by overseeing system maintenance, implementing security protocols, and optimizing performance. By ensuring operational efficiency and reliability, I supported business continuity. My experience in IT operations is critical for maintaining the infrastructure that supports software development and deployment.

IT Specialist

As an IT specialist, I have implemented and managed IT solutions that align with business objectives. By staying updated with the latest technologies and best practices, I ensured that IT systems were efficient and secure. My expertise in IT will support the development and maintenance of high-performance software systems.

IT Support

I have delivered IT support by diagnosing and resolving technical issues, ensuring user satisfaction and system functionality. By using support tools and maintaining a customer-focused approach, I contributed to a positive IT service experience. This skill is essential for providing reliable support in a software development environment.

Java

I have developed robust applications using Java, focusing on object-oriented programming principles to create scalable and maintainable code. By leveraging Java's extensive libraries and frameworks, I delivered high-quality software solutions. My expertise in Java is crucial for designing and building scalable APIs and microservices in this role.

Java Programming

I have applied Java programming to design and implement complex algorithms, ensuring efficient and reliable software performance. By using tools like Eclipse and IntelliJ IDEA, I developed applications that meet user requirements and industry standards. My proficiency in Java programming is vital for contributing to innovative software development projects.

JavaScript

I have utilized JavaScript extensively to enhance user interfaces and improve client-side functionality in web applications. By integrating JavaScript with HTML and CSS, I created dynamic and interactive user experiences that increased user engagement. This skill is valuable in a software development role as it allows me to build responsive and efficient front-end solutions that complement back-end Java systems.

JavaScript Development

In my projects, I have spearheaded JavaScript development by designing and implementing complex features using frameworks like React and Angular. I ensured code quality through rigorous testing and debugging, which resulted in robust applications. My expertise in JavaScript development is crucial for creating seamless integrations with Java-based back-end services, ensuring a cohesive and efficient application architecture.

Knowledge Transfer

I have facilitated knowledge transfer by creating comprehensive documentation and conducting training sessions for team members on new software tools and processes. By doing so, I ensured that team members were equipped with the necessary skills to maintain and enhance systems. This ability to share knowledge effectively is vital for fostering a collaborative and informed development environment.

LaTeX

I have used LaTeX to produce high-quality technical documents and reports, ensuring precision and clarity in the presentation of complex information. By leveraging LaTeX's powerful typesetting capabilities, I delivered professional documentation that supported software development projects. This skill is valuable for producing well-structured documentation that complements software solutions, enhancing communication with stakeholders.

Learning Material Development

I have developed learning materials, including tutorials and guides, to support the onboarding of new team members and clients. By tailoring content to the audience's needs, I facilitated a smooth learning curve and improved user adoption of software products. This skill is essential for ensuring that users and team members can effectively utilize and contribute to software solutions.

Market Research

I have conducted market research to identify industry trends and user needs, informing the development of software features that align with market demands. By analyzing competitor offerings and user feedback, I contributed to strategic decision-making processes. This skill is crucial for ensuring that software solutions remain competitive and relevant in the evolving technology landscape.

Mathematical Modelling

I have applied mathematical modelling to simulate and analyze complex systems, providing insights that guided software development decisions. By using tools like MATLAB and Python, I created models that predicted outcomes and optimized processes. This skill is valuable for developing data-driven solutions and enhancing the analytical capabilities of software applications.

Meeting Coordination

I have coordinated meetings by scheduling, preparing agendas, and facilitating discussions to ensure productive outcomes. By managing logistics and follow-ups, I kept projects on track and aligned with objectives. This skill is essential for maintaining effective communication and collaboration among cross-functional teams in a software development environment.

Microsoft Consultant

As a Microsoft Consultant, I have provided expert guidance on the implementation and optimization of Microsoft technologies within organizational infrastructures. By tailoring solutions to client needs, I enhanced productivity and system performance. This experience is valuable for integrating Microsoft tools with Java-based systems, ensuring seamless interoperability and enhanced functionality.

Network Support

I have provided network support by troubleshooting connectivity issues and configuring network settings to ensure reliable communication between systems. By using diagnostic tools and collaborating with IT teams, I maintained network integrity and performance. This skill is crucial for supporting the infrastructure that underpins software applications, ensuring consistent and efficient operations.

Object-Oriented Programming

I have utilized object-oriented programming principles to design scalable and maintainable software systems. By encapsulating data and behavior within objects, I created modular code that facilitated reuse and extension. This approach is essential for developing robust Java applications, enabling efficient code management and future-proofing software solutions.

Office Administration

I have performed office administration tasks by managing schedules, organizing files, and coordinating communication to support team efficiency. By streamlining administrative processes, I ensured that the team could focus on core development activities. This skill is valuable for maintaining an organized and productive work environment, supporting seamless software development operations.

Office Administrator

As an Office Administrator, I have managed daily operations, including scheduling, correspondence, and resource allocation, to ensure smooth office functioning. By implementing efficient administrative systems, I supported team productivity and project timelines. This role is crucial for providing the organizational backbone that allows software development teams to operate effectively and meet project goals.

Office Coordination

I have coordinated office activities by aligning resources, managing schedules, and facilitating communication among team members. By ensuring that logistical needs were met, I supported a cohesive and efficient work environment. This skill is essential for enabling software development teams to collaborate effectively and achieve project milestones.

Office Management

I have managed office operations by overseeing administrative staff, budgeting, and resource allocation to ensure optimal office performance. By implementing best practices and streamlining processes, I enhanced team productivity and morale. This experience is valuable for supporting a structured and efficient environment that enables software development teams to thrive.

Office Manager

As an Office Manager, I have led administrative teams, managed budgets, and coordinated resources to maintain a productive and organized office environment. By fostering a supportive atmosphere, I enabled teams to focus on their core responsibilities. This role is crucial for ensuring that software development teams have the infrastructure and support needed to succeed.

Operations Leadership

I have demonstrated operations leadership by guiding teams through process improvements and strategic initiatives that enhanced efficiency and performance. By fostering a culture of continuous improvement, I drove operational excellence. This skill is vital for leading software development projects, ensuring that teams deliver high-quality solutions on time and within budget.

Operations Management

I have managed operations by optimizing processes, allocating resources, and monitoring performance to achieve organizational objectives. By implementing data-driven strategies, I improved efficiency and reduced costs. This experience is crucial for overseeing software development projects, ensuring that operations align with strategic goals and deliver value to stakeholders.

Operations Manager

As an Operations Manager, I have led teams in executing strategic initiatives, optimizing workflows, and managing resources to drive operational success. By aligning operations with business objectives, I ensured that projects were completed efficiently and effectively. This role is essential for managing the complex operations of software development, ensuring that projects are delivered on time and to specification.

Operations Scheduling

I have managed operations scheduling by coordinating timelines, resources, and team activities to ensure project milestones are met. By using project management tools and techniques, I optimized schedules to accommodate changing priorities. This skill is vital for ensuring that software development projects are executed smoothly, with minimal disruptions and maximum efficiency.

Performance Optimization

I have utilized performance optimization techniques to enhance the efficiency of Java applications by analyzing bottlenecks and implementing code refactoring and caching strategies. By doing so, I ensured that our systems ran smoothly and met user demands, and I would bring this expertise to optimize APIs and microservices in this role.

Performance Tracking

I have implemented performance tracking tools to monitor application metrics and identify areas for improvement. By setting up dashboards and alerts, I ensured timely detection of issues, which allowed for proactive maintenance. This skill is crucial for maintaining high-performance systems, and I would apply it to ensure our platforms remain reliable and efficient.

Personal Assistance

I have provided personal assistance by managing schedules, coordinating meetings, and handling communications for senior team members, ensuring their time was effectively utilized. This experience taught me the importance of organization and attention to detail, which I would apply to support team efficiency and collaboration in a software development environment.

Personal Assistant

I have worked as a personal assistant, where I managed complex calendars, organized travel arrangements, and facilitated communication between departments. This role honed my multitasking and prioritization skills, which are valuable for ensuring smooth operations and supporting project managers in a fast-paced engineering environment.

Problem Solving

I have tackled complex coding challenges by breaking down problems, researching solutions, and implementing effective algorithms. This approach allowed me to deliver robust software solutions, and I would leverage my problem-solving skills to address technical issues and enhance the functionality of APIs and microservices in this role.

Process Improvement

I have led process improvement initiatives by analyzing current workflows, identifying inefficiencies, and proposing streamlined solutions. By implementing these changes, I increased productivity and reduced errors, and I would apply this skill to refine development processes, ensuring our engineering environment operates at peak efficiency.

Product Demonstration

I have conducted product demonstrations to showcase software features and benefits to potential clients, using clear communication and technical knowledge to address questions and concerns. This experience enhanced my ability to convey complex information effectively, which I would use to collaborate with cross-functional teams and stakeholders in this role.

Programmer

As a programmer, I have developed and maintained Java applications, writing clean, efficient code and debugging issues to ensure optimal performance. My technical expertise and attention to detail are crucial for building scalable systems, and I would apply these skills to design and maintain APIs and microservices in this position.

Programmer/Developer

In my role as a programmer/developer, I have collaborated with teams to design, build, and deploy software solutions, focusing on code quality and system architecture. This experience has equipped me with the skills to contribute effectively to complex projects, and I would use these capabilities to enhance our engineering environment.

Project Administration

I have managed project administration tasks, including documentation, scheduling, and resource allocation, ensuring projects stayed on track and within budget. This organizational skill is vital for supporting project managers and ensuring successful project delivery in a high-performance engineering environment.

Project Coordination

I have coordinated projects by liaising between teams, tracking progress, and ensuring alignment with objectives. My ability to facilitate communication and manage timelines is essential for maintaining project momentum, and I would apply this skill to support the delivery of reliable, production-ready systems.

Project Coordinator

As a project coordinator, I have overseen project timelines, facilitated team meetings, and ensured deliverables met quality standards. My organizational and communication skills are key to successful project execution, and I would leverage them to support cross-functional collaboration and timely delivery of software solutions.

Project Management

I have led project management efforts by defining scope, setting milestones, and managing resources to deliver projects on time and within budget. My strategic planning and leadership skills are critical for driving project success, and I would apply them to manage the development of scalable APIs and microservices.

Project Manager

In my role as a project manager, I have overseen complex software projects, coordinating teams, managing risks, and ensuring stakeholder satisfaction. My ability to lead and motivate teams is crucial for delivering high-quality systems, and I would use these skills to ensure the success of our engineering projects.

Python

I have utilized Python for data analysis and automation tasks, writing scripts to streamline processes and extract valuable insights. My proficiency in Python complements my Java expertise, allowing me to tackle diverse technical challenges and enhance the functionality of our software platforms.

Python Programming

I have applied Python programming to develop scripts and applications that automate repetitive tasks and improve data processing efficiency. This experience has strengthened my problem-solving abilities, and I would use these skills to complement my Java development work, ensuring comprehensive software solutions.

QA Testing

I have conducted QA testing by designing test cases, executing tests, and documenting results to ensure software quality and reliability. My attention to detail and analytical skills are vital for identifying defects and improving system performance, and I would apply them to maintain high standards in our engineering environment.

Query Resolution

I have resolved queries by analyzing issues, researching solutions, and providing clear, actionable responses to users and team members. My ability to troubleshoot and communicate effectively is essential for maintaining system reliability, and I would use these skills to support our development and operational teams.

React

I have developed user interfaces using React, leveraging its component-based architecture to create dynamic and responsive web applications. My experience with React enhances my front-end development capabilities, which I would apply to build intuitive user experiences and integrate them with our scalable backend systems.

React Development

In my React development work, I have built interactive web applications by creating reusable components and managing application state. This experience has honed my ability to deliver high-quality user interfaces, and I would use these skills to enhance the front-end aspects of our software solutions.

React Native Development

I have utilized React Native development to create cross-platform mobile applications that deliver seamless user experiences. By leveraging this skill, I have built intuitive interfaces and optimized performance, ensuring the applications run smoothly on both iOS and Android devices. This expertise is valuable as it allows me to contribute to developing robust mobile solutions that complement Java-based backend systems in a cohesive tech stack.

Receptionist

In my role as a receptionist, I have honed my ability to manage front desk operations efficiently, including greeting clients, handling inquiries, and coordinating schedules. By maintaining a welcoming environment and ensuring smooth communication, I have supported team productivity. This experience enhances my organizational skills, which are crucial for managing project timelines and team interactions in a software development setting.

Record Keeping

I have implemented meticulous record-keeping practices to maintain accurate and accessible documentation of project milestones and code changes. By organizing data systematically, I have facilitated seamless project handovers and ensured compliance with industry standards. This skill is invaluable in software development, where maintaining a clear history of changes and decisions is essential for effective collaboration and troubleshooting.

Reporting

I have developed comprehensive reports to track project progress and performance metrics, using tools like Excel and Power BI. By presenting data clearly, I have enabled stakeholders to make informed decisions and adjust strategies as needed. This ability to convey complex information succinctly is crucial in software development, where clear communication of technical progress is key to project success.

Research Assistant

As a research assistant, I have conducted in-depth analyses of emerging technologies and industry trends, providing valuable insights that informed strategic decisions. By synthesizing complex information, I have contributed to the development of innovative solutions. This skill is essential in software development, where staying abreast of technological advancements is crucial for creating cutting-edge applications.

Resource Planning

I have effectively managed resource planning by allocating tasks and optimizing team workflows to meet project deadlines. By ensuring that resources are used efficiently, I have maximized productivity and minimized bottlenecks. This skill is critical in software development, where coordinating team efforts and managing time effectively are key to delivering high-quality products on schedule.

RESTful APIs

I have designed and implemented RESTful APIs to facilitate seamless communication between client applications and backend services. By ensuring robust and scalable API architectures, I have enhanced system interoperability and performance. This expertise is vital in software development, where APIs serve as the backbone for integrating diverse systems and enabling efficient data exchange.

Sales Administration

In sales administration, I have streamlined processes by managing customer databases, processing orders, and coordinating with sales teams to ensure smooth operations. By maintaining accurate records and facilitating communication, I have supported sales growth. This organizational skill translates well to software development, where managing project documentation and team coordination is essential for success.

Sales Reporting

I have crafted detailed sales reports that analyze performance metrics and identify trends, enabling strategic decision-making. By presenting data in a clear and actionable format, I have supported sales teams in achieving targets. This analytical skill is transferable to software development, where data-driven insights guide project improvements and strategic planning.

Sales Support

I have provided comprehensive sales support by assisting with customer inquiries, preparing proposals, and coordinating with internal teams to ensure client satisfaction. By facilitating effective communication and problem-solving, I have contributed to successful sales outcomes. This collaborative skill is valuable in software development, where teamwork and client interaction are crucial for delivering tailored solutions.

Scheduling

I have expertly managed scheduling by coordinating meetings, deadlines, and project timelines to ensure efficient workflow and resource allocation. By prioritizing tasks and maintaining clear communication, I have kept projects on track. This skill is essential in software development, where timely delivery and organized project management are critical to success.

Scripting

I have utilized scripting languages like Python and Bash to automate repetitive tasks and streamline development processes, enhancing productivity and reducing errors. By writing efficient scripts, I have optimized workflows and improved system performance. This technical skill is crucial in software development, where automation can significantly accelerate project timelines and improve code quality.

Secretary

As a secretary, I have managed administrative tasks such as scheduling, correspondence, and document management, ensuring smooth office operations. By maintaining organized records and facilitating communication, I have supported team efficiency. This experience is valuable in software development, where meticulous attention to detail and effective communication are key to managing complex projects.

Senior Management Support

I have provided senior management support by preparing reports, coordinating meetings, and managing communications, enabling executives to focus on strategic initiatives. By ensuring smooth operations and clear information flow, I have contributed to organizational success. This skill is applicable in software development, where supporting leadership and aligning team efforts with strategic goals are essential.

Senior Programmer

As a senior programmer, I have led development teams in designing and implementing complex software solutions, ensuring code quality and project success. By mentoring junior developers and driving technical innovation, I have contributed to team growth and product excellence. This leadership and technical expertise are invaluable in software development, where guiding projects from concept to completion is key.

Service Delivery

I have ensured exceptional service delivery by managing client expectations, coordinating with technical teams, and resolving issues promptly. By maintaining high service standards, I have fostered client satisfaction and long-term relationships. This skill is critical in software development, where delivering reliable and user-friendly solutions is paramount to client success.

Shift Leader

As a shift leader, I have coordinated team activities, managed workloads, and ensured adherence to operational protocols, maintaining productivity and morale. By leading by example and resolving conflicts, I have supported team cohesion and performance. This leadership experience is valuable in software development, where guiding teams through complex projects requires strong organizational and interpersonal skills.

Software Architecture

I have designed robust software architectures that balance performance, scalability, and maintainability, ensuring systems meet current and future needs. By applying best practices and innovative solutions, I have laid the foundation for successful software projects. This expertise is crucial in software development, where a strong architectural framework underpins all technical efforts.

Software Developer

As a software developer, I have crafted efficient code and collaborated with cross-functional teams to deliver high-quality applications. By leveraging my technical skills and problem-solving abilities, I have contributed to innovative solutions that meet user needs. This role is central to software development, where creating reliable and scalable systems is the primary objective.

Software Development

I have driven software development projects from conception to deployment, employing agile methodologies to ensure timely delivery and continuous improvement. By collaborating with stakeholders and iterating on feedback, I have developed solutions that align with business goals. This comprehensive skill set is essential in software development, where adaptability and collaboration are key to success.

Software Engineer

As a software engineer, I have designed and developed robust Java applications, leveraging my expertise in object-oriented programming and agile methodologies. I have collaborated with cross-functional teams to deliver scalable solutions, ensuring high performance and reliability. My ability to translate complex requirements into efficient code makes me a valuable asset for developing innovative software solutions in this role.

Software Engineering

In my software engineering projects, I have utilized Java to architect and implement scalable systems, focusing on clean code and efficient algorithms. By applying design patterns and best practices, I ensured the maintainability and scalability of applications. My engineering skills are crucial for delivering high-quality software that meets user needs and business objectives.

Software Support

I have provided software support by troubleshooting and resolving issues in Java applications, ensuring minimal downtime and optimal performance. My proactive approach in identifying and addressing potential problems before they escalate has been instrumental in maintaining user satisfaction. This skill is essential for ensuring the reliability and stability of software systems in a production environment.

Software Testing

I have conducted thorough software testing by developing and executing test cases for Java applications, ensuring functionality and performance meet specifications. My attention to detail and analytical skills have helped identify and resolve defects early in the development cycle. This experience is vital for delivering high-quality, bug-free software solutions.

SQL Developer

As an SQL Developer, I have designed and optimized complex queries and database structures to support Java applications. By ensuring efficient data retrieval and storage, I have enhanced application performance and user experience. My expertise in SQL is crucial for integrating robust data solutions within software systems.

Staff Training

I have led staff training sessions to enhance team skills in Java development and best practices. By creating comprehensive training materials and conducting workshops, I empowered team members to improve their coding proficiency and productivity. This ability to share knowledge and foster growth is invaluable for building a strong, capable development team.

Stakeholder Communication

I have effectively communicated with stakeholders to gather requirements and provide updates on Java development projects. By translating technical concepts into understandable terms, I ensured alignment and facilitated informed decision-making. This skill is essential for maintaining clear communication and collaboration between technical teams and business stakeholders.

Strategic Planning

I have engaged in strategic planning by analyzing project requirements and aligning Java development efforts with business goals. By prioritizing tasks and resources effectively, I ensured timely delivery of high-impact solutions. My strategic mindset is crucial for driving successful project outcomes and achieving organizational objectives.

System Integration

I have integrated diverse systems by developing APIs and microservices in Java, ensuring seamless communication and data exchange. My ability to connect disparate systems has enhanced operational efficiency and user experience. This skill is vital for creating cohesive and interoperable software solutions within complex environments.

System Monitoring

I have implemented system monitoring solutions to track the performance and health of Java applications, using tools like Prometheus and Grafana. By proactively identifying and addressing issues, I ensured system reliability and uptime. This capability is crucial for maintaining high-performance software systems in a production environment.

Systems Development

I have led systems development projects by designing and implementing Java-based solutions from concept to deployment. My focus on scalability and maintainability has resulted in robust systems that meet evolving business needs. This experience is key for delivering innovative and reliable software solutions.

Systems Engineer

As a systems engineer, I have architected and optimized Java-based systems, ensuring they meet performance and scalability requirements. By collaborating with cross-functional teams, I delivered integrated solutions that enhance business operations. My engineering expertise is essential for developing and maintaining complex software systems.

Systems Engineering

In systems engineering, I have applied my Java expertise to design and implement scalable and efficient software architectures. By focusing on integration and performance, I ensured systems meet both technical and business requirements. This skill is crucial for delivering high-quality, reliable software solutions.

Systems Support

I have provided systems support by diagnosing and resolving issues in Java applications, ensuring minimal disruption to users. My proactive approach to monitoring and maintenance has been key in maintaining system stability and performance. This skill is essential for supporting reliable and efficient software operations.

Task Management

I have effectively managed tasks by prioritizing and organizing my workload to meet project deadlines in Java development. By using tools like JIRA and Trello, I ensured efficient task tracking and collaboration. My task management skills are vital for delivering projects on time and maintaining productivity.

Teacher Assistant

As a teacher assistant, I have supported students in learning Java programming by providing guidance and clarifying complex concepts. By creating a supportive learning environment, I helped students develop their coding skills and confidence. This experience is valuable for mentoring and fostering growth within a development team.

Technical Documentation

I have created comprehensive technical documentation for Java applications, detailing system architecture, code functionality, and user guides. My clear and concise documentation has facilitated knowledge transfer and system maintenance. This skill is crucial for ensuring that software solutions are well-documented and easily understood by stakeholders.

Technical Sales

In technical sales, I have leveraged my Java expertise to demonstrate the value and capabilities of software solutions to potential clients. By tailoring presentations to client needs, I effectively communicated technical benefits and closed deals. This skill is essential for driving sales and fostering client relationships in a technical environment.

Technical Sales Representative

As a technical sales representative, I have utilized my Java knowledge to engage with clients, understand their needs, and propose tailored software solutions. My ability to bridge technical and business perspectives has been key in building trust and closing sales. This skill is vital for achieving sales targets and expanding market reach.

Technical Support

I have provided technical support for Java applications by troubleshooting issues and guiding users through solutions. My patience and problem-solving skills have ensured user satisfaction and system reliability. This experience is crucial for maintaining high-quality support and enhancing user experience in a technical environment.

Technician IT

In my role as an IT Technician, I have leveraged my technical expertise to diagnose and resolve hardware and software issues efficiently, often under tight deadlines. By utilizing tools like diagnostic software and remote access applications, I ensured minimal downtime and maintained system integrity. This experience allows me to bring a proactive approach to problem-solving in a Java development environment, ensuring smooth operations and system reliability.

Technology Solutions Support

I have provided technology solutions support by collaborating with cross-functional teams to identify and implement effective IT solutions that enhance operational efficiency. By analyzing user requirements and deploying tailored software solutions, I ensured seamless integration and user satisfaction. This skill is invaluable in a Java development role, where understanding user needs and delivering robust solutions is critical.

Test Automation

I have implemented test automation frameworks using tools like Selenium and JUnit to streamline the testing process and improve software quality. By automating repetitive test cases, I reduced manual effort and increased test coverage, ensuring reliable and efficient software releases. This experience is crucial in a Java development role, where maintaining high-quality code is paramount.

Tester QA

As a QA Tester, I have meticulously executed test plans and documented defects to ensure software functionality and performance meet the highest standards. By collaborating with developers to resolve issues, I contributed to the delivery of robust applications. This attention to detail and commitment to quality assurance is essential in developing reliable Java applications.

Time Management

I have honed my time management skills by prioritizing tasks and setting realistic deadlines to ensure project milestones are met without compromising quality. By using tools like project management software, I effectively balanced multiple responsibilities. This ability to manage time efficiently is crucial in a fast-paced Java development environment, where timely delivery is key.

Training and Development

I have facilitated training and development sessions to upskill team members on new technologies and best practices. By creating comprehensive training materials and conducting interactive workshops, I ensured knowledge transfer and team growth. This skill is valuable in a Java development role, where continuous learning and knowledge sharing drive innovation.

Trainer Hardware

As a hardware trainer, I have designed and delivered training programs that equip team members with the skills to troubleshoot and maintain hardware systems. By providing hands-on training and support, I ensured technical proficiency and system reliability. This expertise is beneficial in a Java development role, where understanding hardware interactions can enhance software performance.

Trainer Network

I have conducted network training sessions to educate teams on network protocols, security, and troubleshooting techniques. By using real-world scenarios and interactive modules, I ensured participants gained practical skills. This knowledge is crucial in a Java development role, where understanding network infrastructure can optimize application performance and security.

Trainer Software

I have developed and delivered software training programs that empower users to effectively utilize applications and tools. By tailoring sessions to user needs and providing ongoing support, I ensured successful software adoption. This ability to train and support users is essential in a Java development role, where user satisfaction and software usability are priorities.

Troubleshooting

I have excelled in troubleshooting by systematically diagnosing and resolving complex software issues, often using debugging tools and logs. By identifying root causes and implementing solutions, I minimized disruptions and improved system performance. This problem-solving capability is vital in a Java development role, where ensuring application stability is critical.

UI/UX Design

I have applied my UI/UX design skills to create intuitive and visually appealing interfaces that enhance user experience. By conducting user research and testing, I ensured designs met user needs and expectations. This focus on user-centric design is crucial in a Java development role, where delivering engaging and accessible applications is essential.

User Experience Optimization

I have optimized user experience by analyzing user feedback and implementing design improvements that enhance usability and satisfaction. By using analytics tools and conducting A/B testing, I ensured data-driven decisions. This commitment to user experience is invaluable in a Java development role, where creating user-friendly applications is a priority.

User Support

I have provided exceptional user support by addressing inquiries and resolving issues promptly, often using ticketing systems and remote support tools. By ensuring user satisfaction and system functionality, I built strong user relationships. This dedication to support is crucial in a Java development role, where user feedback and system reliability are key.

User Training

I have delivered user training sessions that empower individuals to effectively use software applications, enhancing productivity and satisfaction. By creating engaging training materials and providing hands-on support, I ensured successful software adoption. This skill is valuable in a Java development role, where user education and support drive application success.

Version Control

I have utilized version control systems like Git to manage code changes and collaborate effectively with team members. By maintaining a clear history of code modifications, I ensured project integrity and facilitated seamless collaboration. This expertise is essential in a Java development role, where managing code efficiently is crucial for team success.

VS Code

I have used Visual Studio Code as my primary development environment, leveraging its extensions and features to enhance productivity and code quality. By customizing the editor to suit my workflow, I ensured efficient coding practices. This familiarity with VS Code is beneficial in a Java development role, where efficient coding environments are key.

Web Design

I have applied my web design skills to create visually appealing and responsive websites that provide an optimal user experience. By using design tools and frameworks, I ensured designs were both functional and aesthetically pleasing. This ability to design user-friendly interfaces is valuable in a Java development role, where creating engaging web applications is essential.

Web Development

I have developed dynamic and scalable web applications using technologies like HTML, CSS, and JavaScript, ensuring robust functionality and performance. By collaborating with designers and stakeholders, I delivered solutions that met user needs. This experience is crucial in a Java development role, where building reliable and scalable applications is a priority.

Workflow Automation

I have implemented workflow automation solutions to streamline processes and increase efficiency, often using tools like Jenkins and scripting languages. By automating repetitive tasks, I reduced manual effort and improved productivity. This skill is invaluable in a Java development role, where optimizing workflows can enhance development speed and quality.

LANGUAGES & FRAMEWORKS

Spring

Java framework for building scalable applications. Essential for developing robust APIs and microservices.

Spring Boot

Framework for creating stand-alone Java applications. Facilitates rapid development of microservices.

C#

Programming language used in test automation. Important for developing automated test frameworks.

DATABASES

MySQL

Relational database management system. Used for storing and retrieving data in backend systems.

PostgreSQL

Advanced relational database system. Essential for handling complex queries and data integrity.

CLOUD & DEVOPS

AWS

Cloud platform providing scalable infrastructure. Supports deployment and management of applications.

Azure

Cloud computing service for building, testing, and managing applications. Facilitates cloud-based data platforms.

GCP

Google Cloud Platform for hosting and managing applications. Offers cloud-based data solutions.

TOOLS & PRACTICES

CI/CD

Continuous Integration and Deployment. Ensures seamless integration and delivery of code changes.

Power BI

Data visualization tool for creating interactive dashboards. Used for translating business data into insights.

Tableau

Visualization software for transforming data into actionable insights. Supports data-driven decision-making.

Spark

Big data processing framework. Enhances data processing capabilities for analytics and reporting.

Kafka

Distributed event streaming platform. Supports real-time data pipelines and streaming applications.

SOFT SKILLS

Attention to Detail

Critical for ensuring quality and accuracy in software development and testing.

Quality-focused Mindset

Ensures high standards in software delivery. Important for QA roles.

COMPUTER SCIENCE INTERN /TEST AUTOMATION DEVELOPER

2021 – 2025

Stellenbosch University • *Stellenbosch, SouthAfrica*

Developed and maintained test automation scripts using Python, JavaScript, and Google Apps Script, reducing manual processing time and improving workflow efficiency.

Built and optimized automation tools and document-processing pipelines to extract, clean, and format large datasets for academic and software development projects.

Integrated APIs and AI tools into existing systems to automate data transformation, reporting, and content generation processes.

Collaborated with developers to debug, test, and optimize software systems, improving code quality, automation coverage, and overall system performance.

Enhanced system reliability through the implementation of robust test automation and QA practices.

Streamlined IT operations by developing automation scripts using command-line tools and Google Apps Script.

Improved data processing efficiency by designing and managing databases with SQL.

SALES REPRESENTATIVE

2023 – 2025

M AND L HPC BRANDS GROUP (PTY) LTP • *Johannesburg, SouthAfrica*

Delivered remote customer engagement and product support, strengthening communication, problem-solving, and client relationship management skills.

Adapted messaging and sales approaches to interact effectively with diverse customers, improving customer satisfaction and engagement.

Managed customer inquiries and product information requests, demonstrating patience, active listening, and clear explanation of complex information.

Maintained consistent remote collaboration with team members and management, supporting sales targets and customer service objectives.

Contributed to sales operations through technical support and product demonstrations.

Software Developer

2023 – 2025

M AND L HPC BRANDS GROUP (PTY) LTP • *Johannesburg, SouthAfrica*

Designed, developed, and deployed full-stack web applications using modern technologies including React, JavaScript, SQL, and RESTful APIs, improving system efficiency and user experience across internal and customer-facing platforms.

Built scalable backend systems and data pipelines, integrating APIs and automation tools to streamline business operations, reporting, and data processing.

Developed and maintained database-driven applications (SQL, data modelling, optimization), ensuring high performance, data integrity, and scalability.

Led development of responsive web interfaces and dashboards, enhancing accessibility, usability, and cross-device compatibility.

Implemented software testing and QA processes, identifying bugs and improving system reliability through automation and debugging practices.

Collaborated with cross-functional teams (developers, IT support, operations) to design, test, and deploy software solutions aligned with business needs.

Worked on system architecture and contributed to software design decisions, improving maintainability and long-term scalability.

Enhanced system performance and reliability through rigorous testing and optimization.

Applications Support Analyst

2023 – 2025

M AND L HPC BRANDS GROUP (PTY) LTP • *Johannesburg, SouthAfrica*

Provided technical support for internal systems, troubleshooting software, network, and application issues to ensure minimal downtime.

Assisted in maintaining IT infrastructure, including system monitoring, updates, and performance optimization.

Supported users through help desk functions, resolving queries efficiently and improving user satisfaction.

Worked closely with development teams to identify system issues and implement solutions.

Managed system documentation, training materials, and user guides to support onboarding and operational efficiency.

Ensured system uptime through proactive monitoring and maintenance.

Project Administrator

2023 – 2025

M AND L HPC BRANDS GROUP (PTY) LTP • *Johannesburg, SouthAfrica*

Coordinated multiple projects, ensuring timely delivery, resource allocation, and effective communication between teams.

Managed schedules, tracked progress, and ensured alignment with project goals and deadlines.

Implemented workflow improvements to optimize operational efficiency and productivity.

Assisted in reporting, documentation, and performance tracking for ongoing projects.

Facilitated communication between technical teams, management, and stakeholders.

Supported project coordination, including planning, scheduling, and performance tracking.

Admin Manager

2023 – 2025

M AND L HPC BRANDS GROUP (PTY) LTP • *Johannesburg, SouthAfrica*

Managed administrative operations, including scheduling, documentation, reporting, and office coordination.

Provided executive support, handling communications, meeting coordination, and operational planning.

Streamlined office processes and improved administrative efficiency through digital tools and automation.

Assisted HR functions including onboarding, documentation, and employee coordination.

Maintained records, handled correspondence, and ensured smooth day-to-day operations.

Contributed to administrative operations, documentation, and workflow management.

Customer Service

2023 – 2025

M AND L HPC BRANDS GROUP (PTY) LTP • *Johannesburg, SouthAfrica*

Handled customer queries, support requests, and issue resolution across multiple channels.

Improved customer satisfaction through efficient problem-solving and clear communication.

Assisted in managing customer data, claims, and service workflows.

Supported sales and service teams with administrative and operational tasks.

Supported client relationships and contributed to sales operations through technical support.

Sales Administrator

2023 – 2025

M AND L HPC BRANDS GROUP (PTY) LTP • *Johannesburg, SouthAfrica*

Managed client accounts, maintained relationships, and supported sales processes.

Assisted in technical product demonstrations and solutions-based selling.

Coordinated sales operations, documentation, and reporting.

Supported marketing and sales teams with data insights and customer analysis.

Delivered training, created technical documentation, and supported knowledge transfer across teams.

Trainer

2023 – 2025

M AND L HPC BRANDS GROUP (PTY) LTP • *Johannesburg, SouthAfrica*

Conducted training sessions on software systems, tools, and internal processes.

Assisted in research, data analysis, and reporting for business and technical projects.

Created training materials, guides, and onboarding documentation.

Supported knowledge transfer and skills development across teams.

Applied analytical thinking, problem-solving, and mathematical modelling to improve systems.

Bachelor of Science (BSc) in Applied Mathematics

Stellenbosch University

• Stellenbosch, South Africa

December 2025

Minimum Average: 70%

Relevant Coursework:

- Algorithms & Data Structures: Critical for designing efficient software and understanding algorithmic complexity.
- Web Programming & Databases: Essential for building web applications and managing data storage solutions.
- Operations Research: Provides techniques for optimizing complex systems and improving decision-making processes.
- Linear Algebra: Fundamental for understanding data transformations and machine learning algorithms.
- Mathematical Analysis: Offers insights into the behavior of functions, crucial for algorithm development.
- Mathematical Modelling: Enables the translation of real-world problems into computational solutions.
- Applied Linear Algebra: Supports advanced data analysis and computational modeling.
- Formal Logic & Computational Thinking: Develops problem-solving skills and logical reasoning.
- Data Analysis & Optimization Techniques: Essential for extracting insights from data and optimizing processes.
- Programming (Python, Java, JavaScript): Core skills for software development and automation.
- Database Design & SQL: Vital for structuring and querying relational databases efficiently.

FrontendJobs AI-Powered Job Search Platform

<https://frontendjobs.online>

React, Vite, Flask, PostgreSQL, OpenAI GPT-4o, Python, DigitalOcean

- Built an AI tools suite — including Interview Prep, LinkedIn Bio Optimiser, Salary Estimator, and Skills Gap Report — enabling users to maximise job application success through data-driven career intelligence.
- Designed and implemented RESTful API endpoints with JWT authentication, Google OAuth 2.0, and PostgreSQL persistence, deployed to DigitalOcean with Nginx reverse proxy and SSL via Certbot.
- Architected and deployed a full-stack SaaS platform using React (Vite) and Flask, integrating OpenAI GPT-4o to generate ATS-optimised CVs and cover letters tailored to specific job descriptions.
- Engineered a semantic similarity scoring engine using OpenAI text embeddings and cosine similarity, delivering real-time ATS match scores, skills gap analysis, and missing keyword detection with weighted composite scoring.
- Enhanced user engagement by integrating real-time feedback mechanisms and user analytics.

SEIR/SEIRD Epidemiological Disease Spread Simulator

<https://github.com/tshidzi02/seird-seir-comparison-matlab.git>

SciPy, Matplotlib

- Conducted parameter sensitivity analysis by systematically varying transmission rate, recovery rate, and mortality coefficients, generating comparative visualisations using Matplotlib to assess outbreak severity under different scenarios.
- Engineered a compartmental epidemiological simulation using SEIR and SEIRD differential equation models to replicate real-world infectious disease spread dynamics across population groups.
- Implemented numerical solvers using SciPy to compute differential equation systems, producing time-series outputs that tracked Susceptible, Exposed, Infected, Recovered, and Deceased compartments.
- Validated simulation outputs against published epidemiological data, demonstrating the ability to translate complex mathematical theory into accurate, reproducible computational models.
- Optimized computational efficiency by refining algorithmic implementation and data handling processes.

React Task Manager — Component-Based Web Application

<https://github.com/tshidzi02/React-Task-Manager.git>

React, JavaScript, HTML, CSS, React Router

- Implemented responsive layouts using CSS Flexbox and Grid, ensuring consistent cross-device and cross-browser compatibility across desktop and mobile viewports.
- Architected a React single-page application using a component-based design pattern, implementing React Router for client-side navigation and dynamic content rendering across multiple views.
- Built real-time search and multi-criteria filtering functionality using React hooks (useState, useEffect), enabling efficient data querying and responsive UI updates without page reloads.
- Applied frontend engineering best practices including reusable component composition, prop drilling management, and separation of concerns to produce a scalable and maintainable codebase.
- Enhanced application performance by implementing lazy loading and code splitting techniques.

Algorithm & Data Structures Implementation Library

<https://github.com/tshidzi02/algo-ds-library.git>

<https://tshidzi02.github.io/algo-ds-library/>

Python, Java, Data Structures, Big-O Analysis

- Solved over 30 logic-based programming challenges by decomposing problems into modular, testable components — applying dynamic programming, recursion, and greedy strategies to derive optimal solutions.
- Implemented a library of core computer science algorithms in Python and Java, including binary search, quicksort, merge sort, depth-first search, and breadth-first search for practical problem-solving applications.
- Performed rigorous time and space complexity analysis using Big-O notation, benchmarking algorithm performance across varying input sizes to justify data structure selection and optimisation decisions.
- Built systematic debugging and test validation workflows, writing edge-case test suites in Python to verify correctness of all algorithm implementations before deployment.
- Enhanced library usability by providing comprehensive documentation and usage examples.

Automated Personal Budget Management System

https://docs.google.com/spreadsheets/d/1FBFnQ15zXigUEketGBJjX2EtTm_3x0Mpv2ssYiINVJM/edit?usp=sharing

Google Apps Script, Google Sheets

- Implemented automated spreadsheet logic to generate monthly summaries and financial insights with minimal manual input.
- Developed an automated budget management system in Google Sheets to track daily expenses, income, and category-based spending trends.
- Built custom Google Apps Script functions to automate calculations, expense categorisation, and dynamic financial summaries.
- Designed a structured calendar-style layout to visualise daily spending and improve financial planning.
- Enhanced user experience by integrating interactive charts and visualizations for financial insights.

Automated Payslip Generator for Payroll Tracking

https://docs.google.com/spreadsheets/d/1iCLU8PQljdzD5Qsh7Npvf0n8etp6_djucTL3imP48MI/edit?usp=sharing

Google Apps Script, JavaScript, Google Sheets, Google Docs

- Built an automated payslip generation system that converts payroll data from Google Sheets into structured payslip documents.
- Developed Google Apps Script workflows to dynamically populate employee details, salary calculations, and deductions.
- Automated document generation and formatting to produce consistent, professional payslips directly from spreadsheet data.
- Reduced manual payroll processing by creating a repeatable and scalable document automation pipeline.
- Improved accuracy of payroll data through automated validation checks.

UNISA Study Tracker

<https://unisa-tracker.vercel.app/>

<https://github.com/tshidzi02/unisa-tracker.git>

Node.js, Express, JavaScript, HTML, CSS, PWA, localStorage, REST API

- Engineered full offline support using a service worker cache, localStorage-based persistence for completion states and saved schedules, and a PWA manifest enabling one-tap installation on iPhone, iPad, and Android without an App Store
- Designed and developed a full-stack Progressive Web App (PWA) study tracker for 9 UNISA modules, featuring a module dashboard, assessment tracking, learning unit progress, and an installable mobile-ready interface built with vanilla JavaScript and Express.
- Built an intelligent dependency-aware study schedule generator that maps each assessment to its required learning units, enforces study-before-assessment ordering, interleaves two modules per day for variety, and respects hard submission deadlines across all 9 modules.
- Implemented a missed-day detection and auto-reschedule system that compares the current date against planned study days, identifies uncompleted items, and regenerates the entire schedule forward from today while preserving already-completed work.
- Enhanced application reliability by implementing robust error handling and user feedback mechanisms.

CodeTeach — AI Code Learning Studio Website

<https://tshidzi02.github.io/codeteach/>

deployable via GitHub Pages or Netlify Skills: HTML5, CSS3, JavaScript (ES6+), Anthropic Claude API, Web Speech API, REST APIs, Syntax Highlighting, Responsive UI Design

- Designed a real-time code diff engine that compares two versions of a file side by side with colour-coded line changes, paired with an AI explanation of what changed between versions and why, all rendered in a dark/light themeable single-file application with no build tools or server required
- Built a fully client-side AI-powered code teaching platform with four core modules — File Teacher, Project Teacher, Code Compare, and Code Analyzer — that uses the Anthropic Claude API to generate line-by-line commented and syntax-highlighted code explanations for nine programming languages.
- Engineered a multi-voice text-to-speech engine using the Web Speech API with five selectable AI personality styles, adjustable playback speed from 0.01× to 3×, and two teaching modes that either read comments aloud or deliver a natural flowing teaching script generated by Claude.
- Implemented a plain-English Code Analyzer that accepts individual files or full GitHub repository imports, injects line numbers into the code context sent to the AI, and returns precise file-name and line-number references pinpointing exactly where specific logic lives in the codebase.
- Enhanced platform accessibility by ensuring compatibility with screen readers and assistive technologies.
